Problem Set 1

Math Camp, Spring 2020, UCSB

Instructor: Woongchan Jeon (wjeon@ucsb.edu)

Due: Wednesday, Sep 2, 2020

This problem set will help you review the key concepts from the course so far. Feel free to use any resources from the course or internet and submit them by email to the instructor (before midnight on the due date).

1. $\mathbf{v}_1, \dots, \mathbf{v}_k \in \mathbb{W} \subset \mathbb{R}^n$ forms a basis of \mathbb{W} . Then given $\mathbf{w} \in \mathbb{W}$, prove that there exists a "unique" $[c_1 \dots c_k]' \in \mathbb{R}^k$ such that

$$\mathbf{w} = \sum_{i=1}^{k} c_i \mathbf{v}_i$$

2. Consider the following matrices:

$$\mathcal{A} = \begin{bmatrix} 2 & 0 \\ 3 & 8 \end{bmatrix} \qquad \mathcal{B} = \begin{bmatrix} 7 & 2 \\ 6 & 3 \end{bmatrix}$$

1

- (a) Calculate \mathcal{AB} and \mathcal{BA} . Is it true that $\mathcal{AB} = \mathcal{BA}$?
- (b) Check $(\mathcal{A}\mathcal{B})^T = \mathcal{B}^T \mathcal{A}^T$.
- (c) Check $(\mathcal{A}\mathcal{B})^{-1} = \mathcal{B}^{-1}\mathcal{A}^{-1}$.
- (d) Check $(\mathcal{A}^T)^{-1} = (\mathcal{A}^{-1})^T$.

3. Find eigenvalues and eigenvectors of the following matrix. Normalize the norm to one.

$$\mathcal{C} = \begin{bmatrix} .8 & .05 \\ .2 & .95 \end{bmatrix}$$

4. Express $-\sum_{i=1}^n \frac{u_i^2}{2\sigma^2}$ and $\sum_{i=1}^n \lambda_i u_i^2$ into quadratic forms using

$$\mathbf{u} := [u_1 \cdots u_n]', \quad \Sigma := \sigma^2 \mathcal{I}_n, \quad \text{and} \quad \Lambda := \begin{bmatrix} \lambda_1 & 0 & \cdots & 0 \\ 0 & \lambda_2 & \cdots & 0 \\ \vdots & \vdots & & \vdots \\ 0 & 0 & \cdots & \lambda_n \end{bmatrix}$$

5. Consider the following regression equation where n > k:

$$y_i = x_{i1}\beta_1 + x_{i2}\beta_2 + \dots + x_{ik-1}\beta_{k-1} + \beta_k + u_i \qquad \forall i = 1, \dots, n$$
$$= \mathbf{x}_i^T \boldsymbol{\beta} + u_i \qquad \forall i = 1, \dots, n$$

We can rewrite this as matrix equation:

$$\mathbf{y} = \mathcal{X}\boldsymbol{\beta} + \mathbf{u}$$

where

$$\mathbf{y} = \begin{bmatrix} y_1 \\ \vdots \\ y_n \end{bmatrix} \qquad \mathcal{X} = \begin{bmatrix} x_{11} & \cdots & x_{1k-1} & 1 \\ \vdots & & \vdots & \vdots \\ x_{n1} & \cdots & x_{nk-1} & 1 \end{bmatrix} \qquad \boldsymbol{\beta} = \begin{bmatrix} \beta_1 \\ \vdots \\ \beta_k \end{bmatrix} \qquad \mathbf{u} = \begin{bmatrix} u_1 \\ \vdots \\ u_n \end{bmatrix}$$

- (a) Check the followings: $\mathcal{X}^T \mathcal{X} = \sum_{i=1}^n \mathbf{x}_i \mathbf{x}_i^T$ and $\mathcal{X}^T \mathbf{y} = \sum_{i=1}^n \mathbf{x}_i y_i$.
- (b) Assume that rank(\mathcal{X}) = k. We derived OLS estimator $\hat{\boldsymbol{\beta}} = (\mathcal{X}^T \mathcal{X})^{-1} \mathcal{X}^T \mathbf{y}$ in class. Show that

$$(\mathcal{X}^T \mathcal{X})^{-1} \mathcal{X}^T \mathbf{y} = \left(\frac{1}{n} \sum_{i=1}^n \mathbf{x}_i \mathbf{x}_i^T\right)^{-1} \left(\frac{1}{n} \sum_{i=1}^n \mathbf{x}_i \mathbf{y}_i\right)$$

HINT: For any vector $\hat{\boldsymbol{\beta}}$ and $n \in \mathbb{N}$, $1\hat{\boldsymbol{\beta}} = \hat{\boldsymbol{\beta}}$ and $1 = n^{-1}n$.

(c) Show that

$$\sqrt{n}(\hat{\boldsymbol{\beta}} - \boldsymbol{\beta}) = \left(\frac{1}{n} \sum_{i=1}^{n} \mathbf{x}_{i} \mathbf{x}_{i}^{T}\right)^{-1} \sqrt{n} \left(\frac{1}{n} \sum_{i=1}^{n} \mathbf{x}_{i} \mathbf{u}_{i}\right)$$

HINT: You may start from

$$\widehat{\boldsymbol{\beta}} = \left(\frac{1}{n} \sum_{i=1}^{n} \mathbf{x}_{i} \mathbf{x}_{i}^{T}\right)^{-1} \left(\frac{1}{n} \sum_{i=1}^{n} \mathbf{x}_{i} \mathbf{y}_{i}\right) = \left(\frac{1}{n} \sum_{i=1}^{n} \mathbf{x}_{i} \mathbf{x}_{i}^{T}\right)^{-1} \left(\frac{1}{n} \sum_{i=1}^{n} \mathbf{x}_{i} (\mathbf{x}_{i}^{T} \boldsymbol{\beta} + \mathbf{u}_{i})\right)$$

(d) Let $\hat{\mathbf{u}} := \mathbf{y} - \mathcal{X} \hat{\boldsymbol{\beta}}$. Show that $\sum_{i=1}^{n} \hat{u}_i^2 = \mathbf{u}^T \mathcal{M}_{\mathcal{X}} \mathbf{u}$ where $\mathcal{M}_{\mathcal{X}} = \mathcal{I}_n - \mathcal{X} (\mathcal{X}^T \mathcal{X})^{-1} \mathcal{X}^T$. HINT: You may start from

$$\hat{\mathbf{u}} = \mathcal{M}_{\mathcal{X}}\mathbf{y} = \mathcal{M}_{\mathcal{X}}(\mathcal{X}\boldsymbol{\beta} + \mathbf{u})$$
